

Aclimatise®

Introducing Aclimatise®, the World's first thermoregulating, waterproof, breathable and windproof fleece. With its unique and innovative fabric technology an Aclimatise® fleece maintains optimum body temperature, whatever the conditions.

Aclimatise® Garments are manufactured using an outer fabric laminated to a breathable Polyurethane membrane incorporating 30% aluminum and a durable water repellent is applied to the 'fabrics' surface. The incorporated lining is moisture wicking and antistatic.

Aclimatise® garments have been independently tested in various environments and have been proven to work in temperatures from as low as -30C to +30C.

All the laminated 'fabrics' incorporated in Aclimatise® garments have been independently tested to industrial standards hence ensuring the highest level of performance.

The first commercial garment from the Aclimatise® range manufactured by Namedroppers will be officially launched at the forthcoming Gadget Show Live exhibition at the NEC Birmingham from the 13th -17th April. Aclimatise® have also teamed up with fibrotronics to exhibit some of the fleece garments incorporating made for iPod technology.

Aclimatise® has been developed by Northern Ireland company APT Fabrics who have over 20 years experience in the development of technical breathable waterproof fabrics for the manufacture of clothing for the forces and emergency services.
